It's Time to Improve Your Accuracy... and Place Your Orders

Before the "Busy Season" Hits

If you attended PACK EXPO in Las Vegas, you may have seen our NEW Evolution checkweigher. It offers a convenient and affordable way to integrate accurate weight measurement into your new or existing filling system.

One of the most unique features of the new Evolution checkweigher is what you don't see. There is no bulky electrical cabinet. The space-saving design locates the electrical components and cables inside the rails of the frame, reducing the checkweigher's footprint. It can be integrated easily into existing filling systems and other machinery to provide precise and reliable weight measurement every time.

The Evolution checkweigher comes with improved accuracy, thanks to its use of Magnetic Force Restoration (MFR) Technology within the load cell. This provides a higher level of accuracy; up to 10 times that of a strain gauge loadcells. MFR improves performance with no reading drift.

The three-leg base makes it easier to level than a unit with four legs. The PLC-based controls are nonproprietary; which makes the checkweigher easier to operate and calibrate in the field. To make it easy to maintain, we made sure no tools were needed to change the belts.

Finalize Your Order Today to Beat the "Fourth Quarter Crunch"

As a heads up, we want to give our customers the opportunity to ensure a speedy delivery for their end-of-the-year orders. We have a larger than normal number of quotes scheduled for possible production in October, November and December.

If you plan to place your order in the next three months to beat an established budgetary or production deadline, please contact your Spee-Dee sales representative today. We can work with you to get your filling machine into our production schedule and ensure we accommodate the delivery date that meets your manufacturing goals.

A NUTTY HOLIDAY: OCT. 22 IS NATIONAL NUT DAY

About 40% of U.S. adults consume nuts daily. We eat almost 7 lbs. of peanuts and nearly 2 lbs. of almonds every year. If you fill nuts, seeds or grains, here's how we can support you:

INCREASE OUTPUT AND REDUCE OPERATING COSTS

— Our low-maintenance, servo-driven volumetric cup fillers have high cycle rates that enable fill speeds of up to 120/minute. Its narrow profile makes it easy to integrate with automatic pouching or cartoning equipment to maximize space usage.

ACHIEVE THE FASTEST AND MOST ACCURATE FILL POSSIBLE

— Our re-engineered rotary filler is the high-speed answer for your high-volume nut application. Our new 24" model is ideal for applications running at 100-150 bottles per minute, and our larger model reaches up to 240 containers per minute! The toolless design and quick-change magnetic funnels speed up changeovers.

AMPLIFY YOUR SPEED USING A SOUND BUDGET

— The Revolution is the perfect combination of performance and simplicity. Get dependable servo drive quality at an affordable price. If you need it fast, you can take delivery in about four weeks. Maximize your filling accuracy with an optional checkweigh system.
